

Former Lead Motorsport Engineer Establishes Mechanical and Electronic Design Consultancy

Salisbury, UK, 1st August 2013 - Former Lead Motorsport Design Engineer at Gill Sensors, Neville Meech, has founded a new UK-based design and engineering consultancy, offering technical design solutions and consultancy services to top-level race teams and automotive organisations.

With over 12 years' experience working closely with engineers within Formula 1, LMS/ALMS, WEC and IndyCar, Meech has become well-known within the Motorsport industry and has built a reputation worldwide for the speed and quality of his design solutions.

Reventec Ltd, which is based near Salisbury, UK, offers mechanical and electronic design consultancy services to clients across high-tech industries including Motorsport, Automotive, Aerospace and Defence, along with other specialist industries and applications.

Meech, who is appointed as Director at Reventec, commented "Reventec has been founded on two core principles; to provide world-class mechanical and electronic design solutions and to deliver them in rapid timeframes. We understand the importance of being able to respond quickly in Motorsport - teams are rarely able to wait weeks or months for a new solution to be delivered."

During his time at Gill, Meech was responsible for leading Gill Sensors' Motorsport activities, designing specialist electronic sensors for use within Formula 1 and Sports Car Racing. From 2011, he led the mechanical design, development and testing of a new ultrasonic fuel flow sensor, which has been widely reported as the likely choice of the FIA for regulatory use within Formula 1 and W.E.C in 2014.

Reventec is already working with globally recognised sports car brands and significant clients within the industrial and aerospace sectors, and encourages new clients to get in touch. Meech commented, "Motorsport has such a diverse range of requirements for mechanical and electronic development – whether you're looking to problem-solve or develop a new solution, we have the skills and experience to help".

Interested parties should contact Reventec at info@reventec.com, or visit reventec.com for further details.
